@Fundootesters

What?

Cross browser testing involves comparing and analyzing the behavior of your website or app against browser or mobile devices environments.

It helps ensure that your website/application delivers an optimal user experience, independent of the browser or mobile devices used to access it.

Common Defects

- Changes in UI
- Font size related issues
- Alignment related issues
- Change in CSS style and color
- Content or label overlapping
- Broken tables or Frames
- Data rendering issues

Multiple ways to perform

- Via chrome developer tools
- Emulators/simulators
- In house device lab
- Device lab on the cloud provided by third Party platforms

How cloud-based platforms help?

- No investment in infrastructure
- No maintenance cost
- Easy to access
- Scalable according to requirements

One stop solution provided by Testsigma

- No complex setups. Works out of the box.
- End-to-end testing for web, mobile apps & APIs
- Create tests 5X faster in simple English
- Extend the platform effortlessly with add-ons
- Zero test maintenance with AI
